K-GEO

DIGITAL GLOBAL EDUCATION PLATFORM

UI/UX Design Mapping, User Roles, Data Flow and Operational Workflow

Director Review Document

Concept visual: Public K-GEO website experience

Document objective

This document explains which interface belongs to each user, what each Stitch UI screen contains, how student-entered data moves through the platform, who receives it, and how K-GEO can manage counseling in a fair First Come, First Served process with controlled priority exceptions.

Executive Summary

How the proposed UI designs form one connected K-GEO platform

The proposed K-GEO system is not a collection of separate web pages. It is one connected platform with a public website, student portal, counselor workspace, administrator control center, and director-level reporting view.

Core project goal

A Kumaraguru student should be able to register once, enter a complete higher-studies profile, request counseling, receive counselor-approved recommendations, upload documents, and track the journey from enquiry to overseas enrolment. At the same time, K-GEO staff should see the same record according to their assigned role and permissions.

Primary platform experiences

Experience	Primary user	Main purpose	Typical screens
Public Website	Students, parents, visitors	Create awareness and generate registrations	Homepage, About, Guidance, Success Stories
Student Portal	Kumaraguru students	Enter profile, check readiness, book counseling and track progress	Dashboard, Profile, Eligibility, Recommendations, Documents
Counselor Portal	K-GEO counselors	Review assigned students, conduct counseling and manage follow-ups	Counselor dashboard, Queue, Student Review, Consultation Management
Admin Portal	K-GEO administrators	Control applications, assignments, data and operations	Admin dashboard, Priority Queue, Data Management
Director View	Director and leadership	Monitor outcomes and strategic performance	Executive dashboard and reports

1. End-to-End Project Movement

1. Student visits the public K-GEO website and selects Student Login, Eligibility Checker, or Book Consultation.
2. Student signs in using institutional credentials and creates a profile.
3. Student enters personal, academic, project, research, test, finance, country, course and appointment information.
4. The system validates the form, creates a unique K-GEO application number and records the exact submission date and time.
5. The admin dashboard immediately updates the total application count and shows the new student as Unassigned.
6. The application enters the counseling queue. Normal order is First Come, First Served, based on submission timestamp.
7. Admin assigns the student to a counselor using counselor workload, country specialization, department knowledge and appointment availability.
8. The counselor dashboard receives the assigned student and displays the student's readiness, priority and next required action.
9. The counselor reviews the profile, conducts the session, adds notes, approves or modifies recommendations and assigns tasks.
10. The student portal updates with recommendations, document requests, deadlines and follow-up appointments.
11. Counselor and admin track university applications, offers, visa progress and final enrolment.
12. Director reports update automatically with registrations, consultations, applications, offers, visas and overseas enrolments.

2. Data Routing and Responsibility

Student action or data	Immediate destination	Operational owner	Visible outcome
Registration submitted	Admin application queue	Admin	Total applications increases; record marked Unassigned
Academic and profile data	Student record and eligibility service	Counselor + Admin	Readiness and gap analysis available
Appointment requested	Appointment dashboard	Admin + assigned counselor	Slot reserved or awaiting confirmation
Counselor assigned	Counselor queue and student dashboard	Admin	Both parties see assignment
Counseling notes entered	Student review record	Counselor	Authorized admin can monitor; student sees approved actions
Recommendation approved	Student recommendation page	Counselor	Countries, courses and universities displayed

Document uploaded	Document tracker	Student; reviewed by counselor	Document status changes to Uploaded/Verified/Correction Needed
Application stage updated	Application tracker	Counselor/Admin	Student and management reports update
Offer, visa or enrolment recorded	Reports database	Admin	Director dashboard and outcome reports update

3. Counseling Queue: First Come, First Served with Controlled Priority

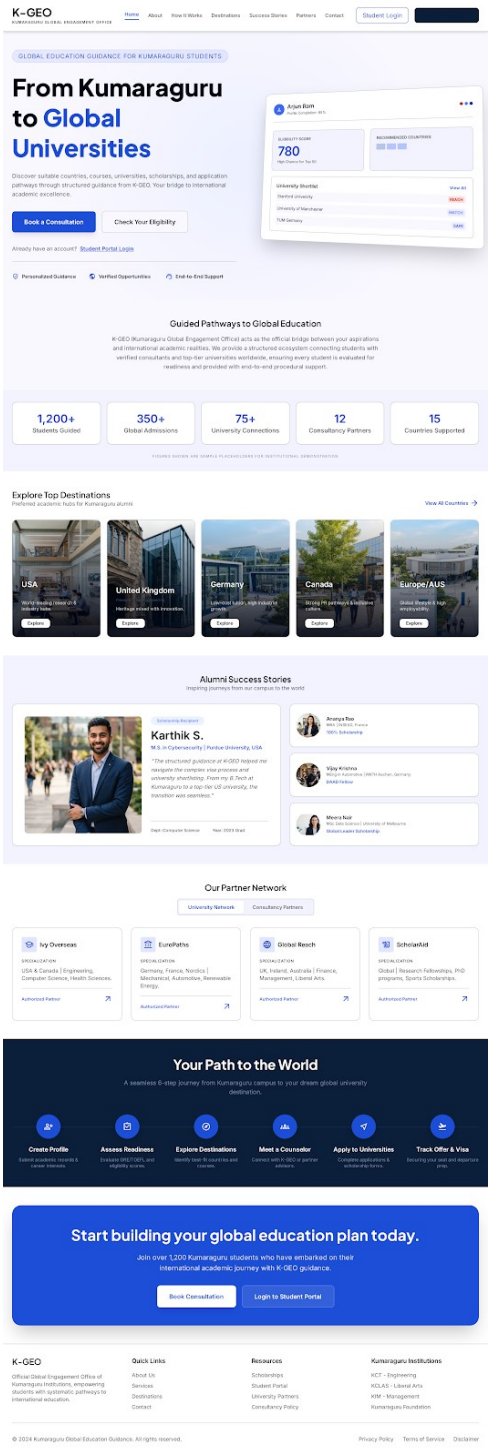

Recommended operating rule

The normal counseling order should be First Come, First Served using the exact date and time of submission. The oldest unhandled request appears first. Authorized K-GEO staff may move a case forward only when there is a documented urgency such as a nearby intake, university deadline, final-year status, existing appointment, visa action or critical document expiry.

- Normal queue: ordered by submitted_at timestamp, oldest first.
- Booked appointments: shown according to confirmed appointment time.
- Urgent exception: requires a reason and audit record.
- Counselor workload: prevents assigning too many cases to one counselor.
- Unattended or incomplete cases: remain visible but can be placed in a separate follow-up queue.
- Every manual priority change should record who changed it, when and why.

4. Public K-GEO Homepage

UI ownership: Public website / all visitors

Purpose

Introduce K-GEO, build institutional trust and convert visitors into student registrations or consultation requests.

What the screen contains

- Hero message and primary actions
- Institutional statistics
- Top destinations and opportunities
- Student success stories
- Partner universities or consultancies
- Student Login and Book Consultation calls to action

Data and process movement

A visitor does not create an operational record until selecting Login, Check Eligibility, or Book Consultation. Those actions route the user into the verified student journey.

Who receives or uses this data

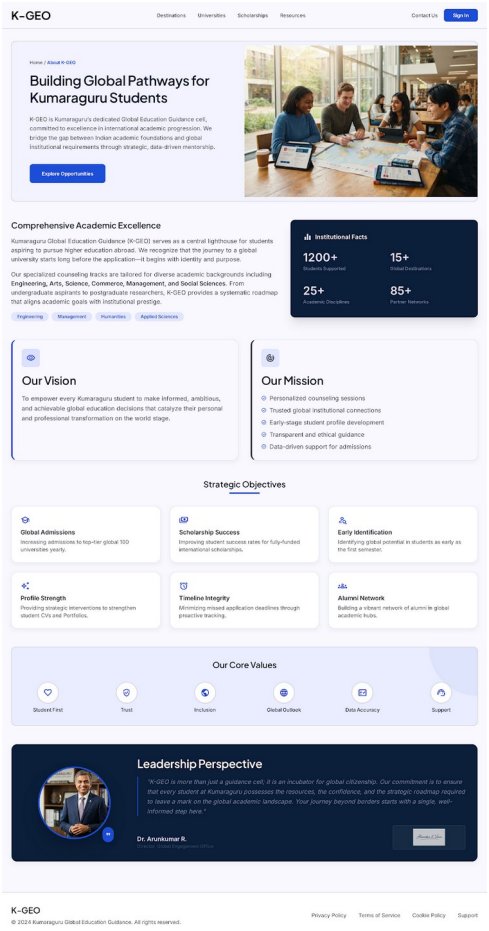

- Students and parents use the information
- Admin manages website content and statistics
- Director approves public-facing claims and outcomes

Important implementation notes

- Public statistics must be editable in the admin CMS
- University logos should be used only with permission
- Success-story photographs require student consent

5. About, Vision, Mission and Goals

UI ownership: Public website / all visitors

Purpose

Explain K-GEO's identity, institutional purpose, supported disciplines, leadership direction and strategic goals.

What the screen contains

- About K-GEO introduction
- Institutional facts
- Vision and mission
- Strategic objectives
- Core values
- Leadership perspective

Data and process movement

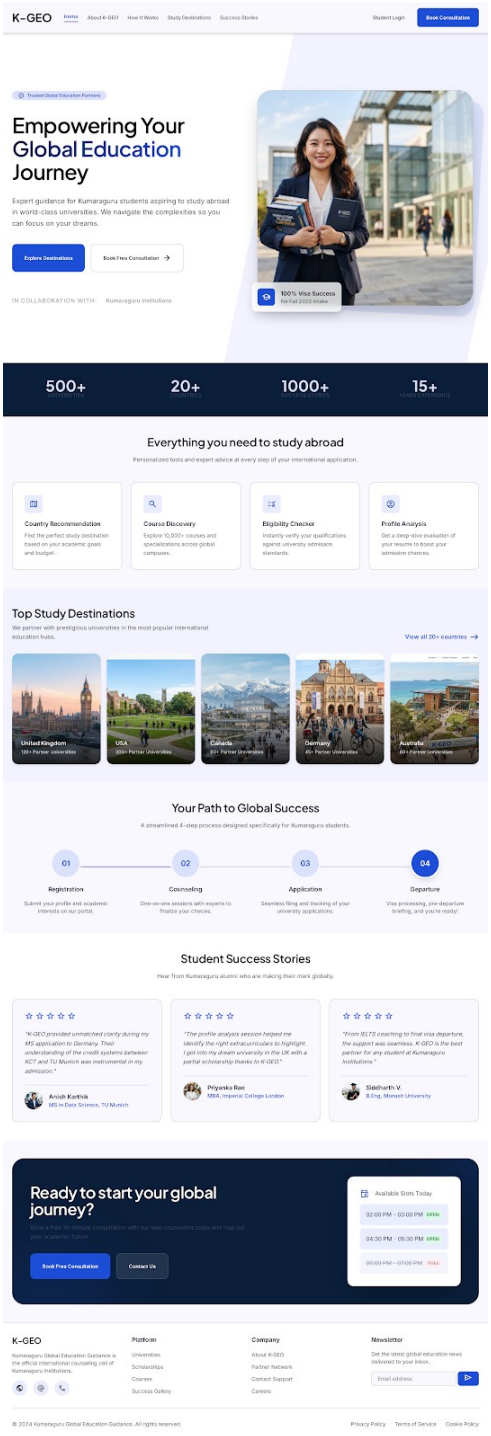

This page mainly displays admin-managed content. It does not directly enter student data, but it strengthens trust before registration.

Who receives or uses this data

- Visitors read the content
- Admin edits approved content
- Director validates vision, mission and leadership message

6. Global Education Guidance Page

UI ownership: Public website / prospective students

Purpose

Explain destinations, services and the structured K-GEO guidance journey before a student registers.

What the screen contains

- Study-abroad guidance overview
- Country and opportunity cards
- How K-GEO supports students
- Calls to explore or begin registration

Data and process movement

Selecting an opportunity or action button routes the visitor to destination information, authentication or consultation registration.

Who receives or uses this data

- Prospective students
- Parents
- Admin content team

7. Secure Login and Role Authentication

UI ownership: Student, counselor and admin access

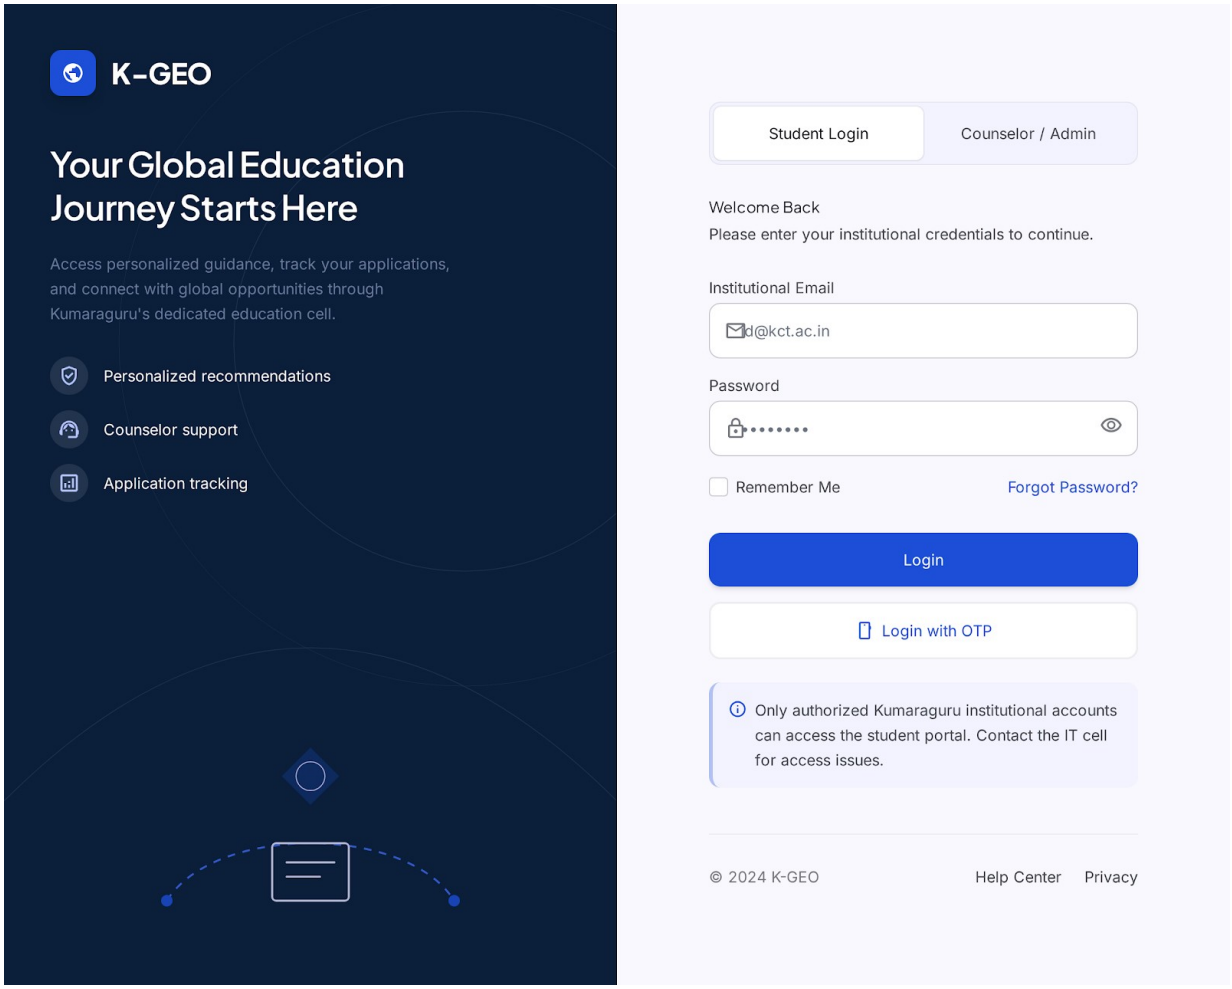

Figure 7: Secure Login and Role Authentication

Purpose

Provide secure role-based access so each user sees only the correct portal and data.

What the screen contains

- Student login
- Counselor/Admin login
- Institutional email and password
- OTP or password recovery
- Security and privacy notice

Data and process movement

Authentication identifies the user role. Students enter the student portal; counselors enter assigned-case tools; admins enter management tools.

Who receives or uses this data

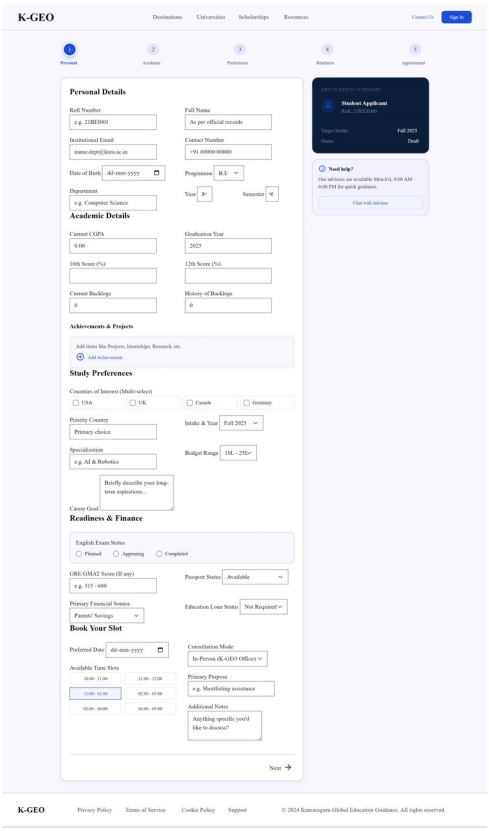

- Student account service
- Counselor identity and permission service
- Admin security controls

Important implementation notes

- Use institutional email verification
- Use role-based access control
- Enable two-factor authentication for staff

8. Student Registration and Consultation Form

UI ownership: Student portal / prospective student

Purpose

Collect the structured student data required for counseling, eligibility analysis, counselor assignment and appointment booking.

What the screen contains

- Personal and institutional details
- Programme and department
- Academic marks and backlogs
- Preferred country, field and intake
- English and standardized tests
- Finance, scholarship and passport status
- Appointment date and time

Data and process movement

When submitted, the form creates a unique application, updates the admin application count, enters the FCFS queue and becomes available to the assigned counselor.

Who receives or uses this data

- Admin receives the new application
- Assigned counselor receives the complete profile
- Student receives confirmation and status

9. Student Dashboard

UI ownership: Student portal

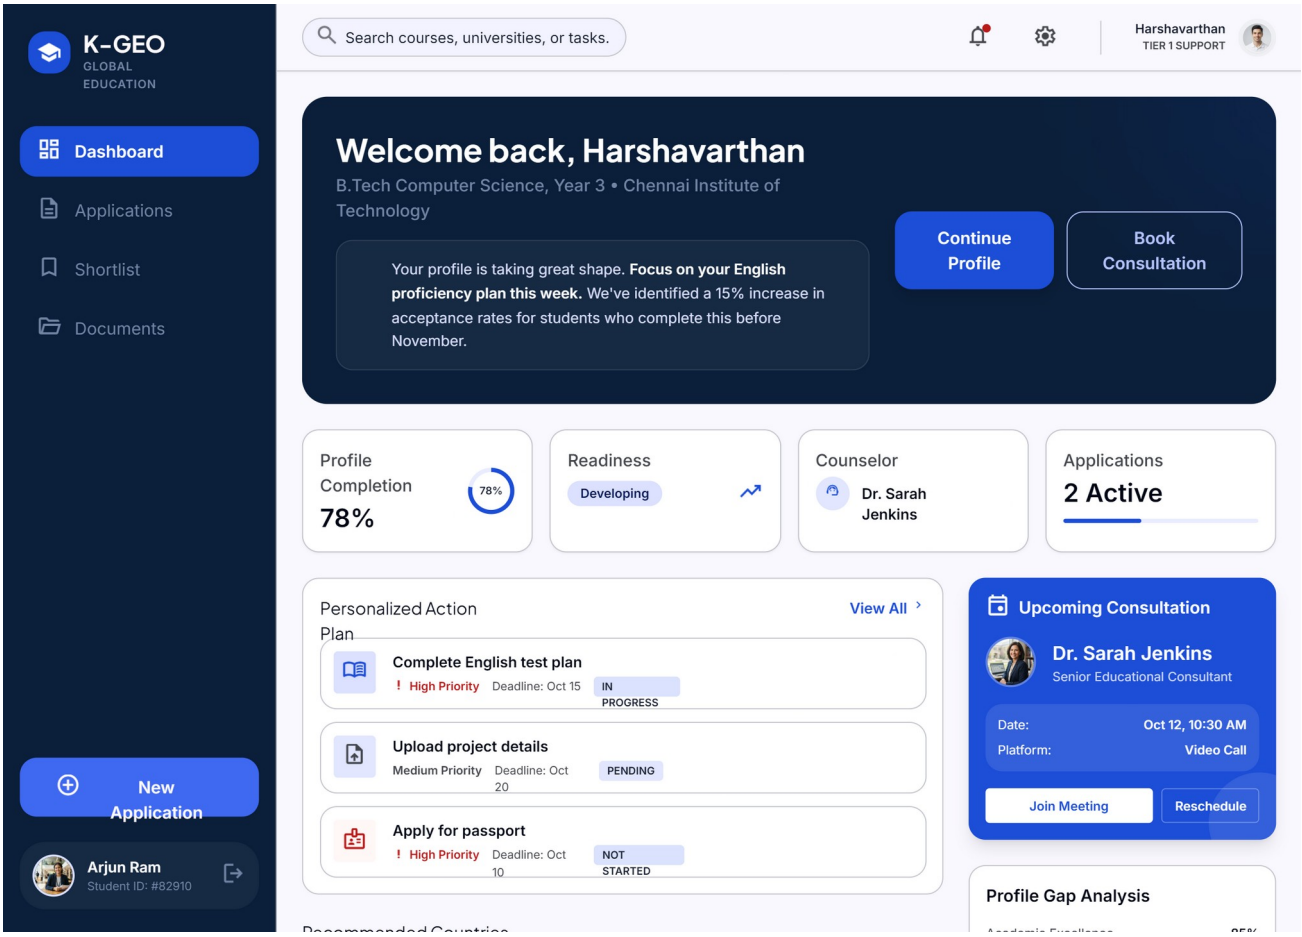

Figure 9: Student Dashboard

Purpose

Give each student one clear summary of profile readiness, counselor status, actions, consultation and application progress.

What the screen contains

- Welcome and profile summary
- Profile completion
- Readiness level
- Assigned counselor
- Personalized action plan
- Upcoming consultation
- Applications and progress

Data and process movement

Dashboard cards read from the central student record. Any counselor task, appointment or application update becomes visible here after authorization.

Who receives or uses this data

- Student primarily uses this screen
- Counselor updates tasks and progress
- Admin monitors overall status

10. Detailed Student Profile

UI ownership: Student portal; read by counselor and admin

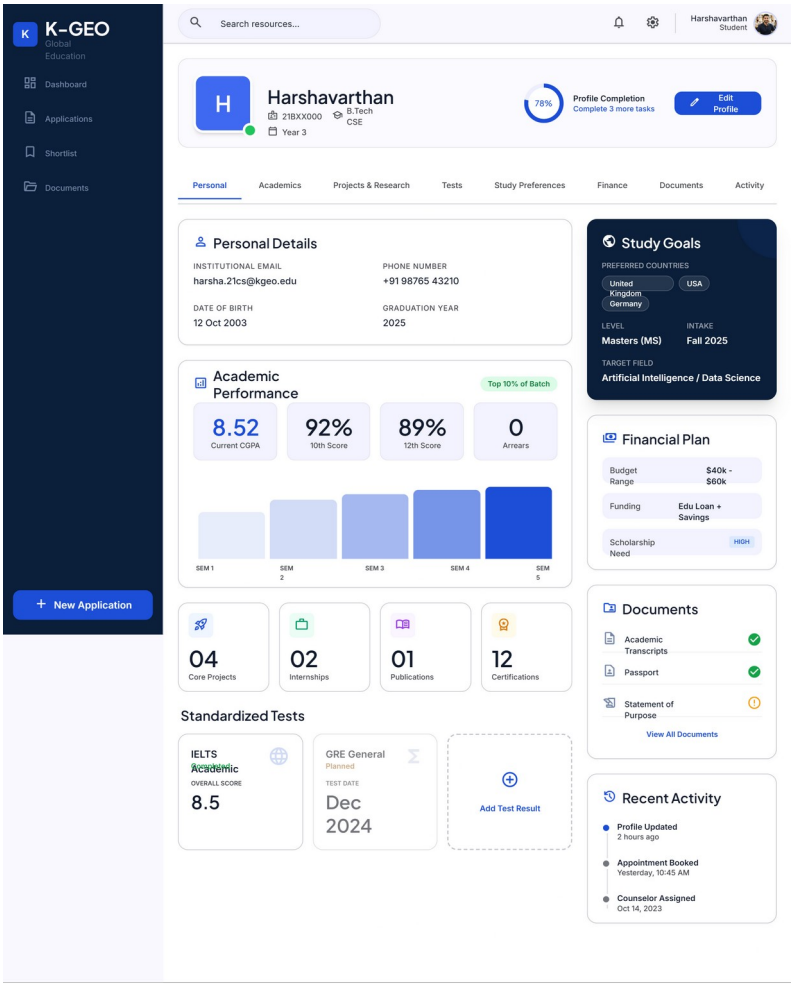

Figure 10: Detailed Student Profile

Purpose

Maintain the single source of truth for the student's academic, professional, research, testing, financial and preference information.

What the screen contains

- Personal details
- Academic performance
- Projects and internships
- Research and publications
- Test readiness
- Country and course preferences
- Documents and recent activity

Data and process movement

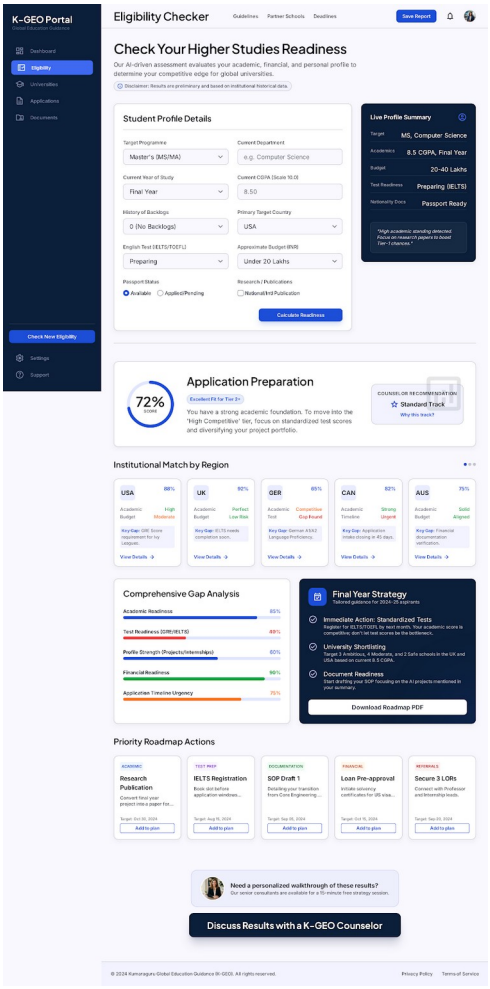

Student updates are saved to the central profile. The eligibility engine recalculates relevant readiness indicators, while the counselor sees the latest profile during review.

Who receives or uses this data

- Student owns profile entry
- Counselor reviews profile quality
- Admin handles access and corrections

11. Preliminary Eligibility Checker

UI ownership: Student portal

Purpose

Provide early, explainable readiness feedback without replacing counselor judgment.

What the screen contains

- Academic readiness score
- Test readiness
- Country fit
- Profile gap analysis
- Year-wise guidance
- Recommended next actions
- Counselor consultation CTA

Data and process movement

The checker reads the student profile and rules database. Results are stored as preliminary guidance and sent to the counselor review page.

Who receives or uses this data

- Student sees preliminary result
- Counselor validates the result
- Admin maintains eligibility rules

12. Personalized Recommendations

UI ownership: Student portal; counselor-approved

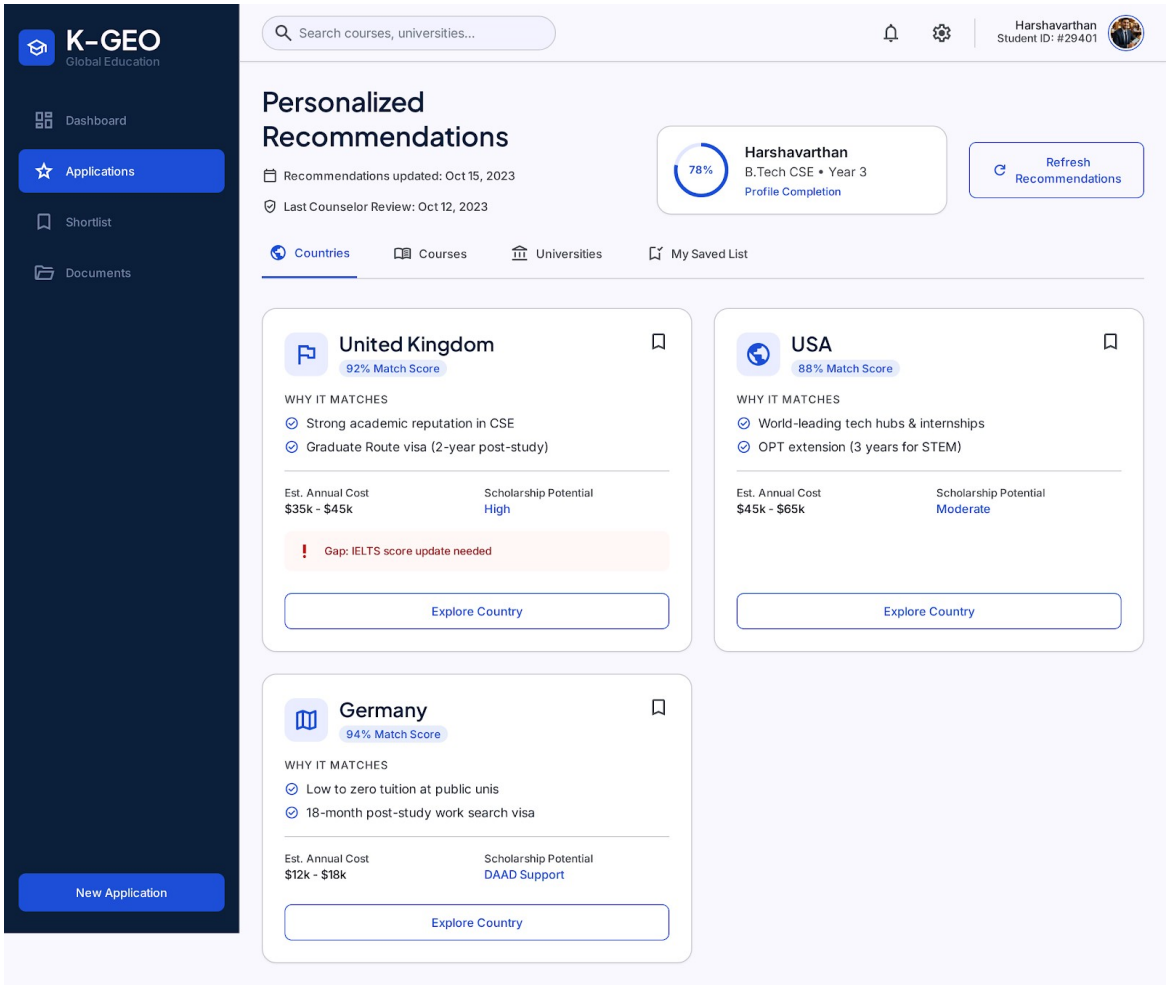

Figure 12: Personalized Recommendations

Purpose

Present suitable countries, courses and later universities based on student qualification, interests, budget, intake and readiness.

What the screen contains

- Country recommendation cards
- Course suggestions
- Fit scores and explanations
- Profile gaps
- Save or compare actions
- Request counselor review

Data and process movement

The system generates recommendations, but the counselor should approve, edit or reject them before they are treated as final guidance.

Who receives or uses this data

- Student receives approved recommendations
- Counselor is accountable for final guidance
- Admin manages the underlying country/course data

13. Application and Document Tracker

UI ownership: Student and counselor portals

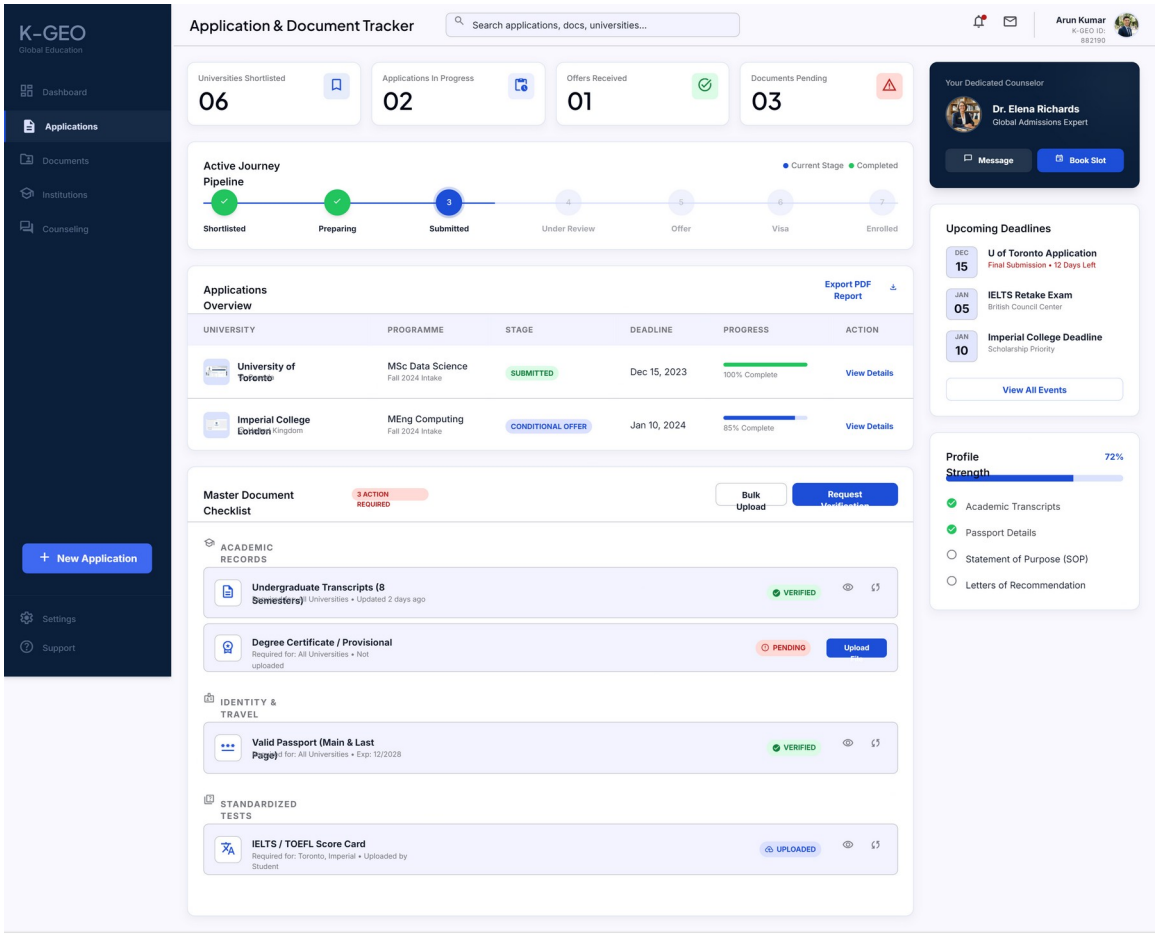

Figure 13: Application and Document Tracker

Purpose

Track applications, documents, deadlines and movement from shortlist to enrolment.

What the screen contains

- Application pipeline
- University applications
- Document checklist
- Upload and verification status
- Upcoming deadlines
- Counselor contact and tasks

Data and process movement

Student uploads documents; counselor reviews and changes document status. Application-stage updates are visible to student, admin and director reports according to permissions.

Who receives or uses this data

- Student uploads and follows progress
- Counselor verifies and updates stages
- Admin monitors exceptions and totals

14. Counselor Dashboard and Daily Worklist

UI ownership: Counselor portal

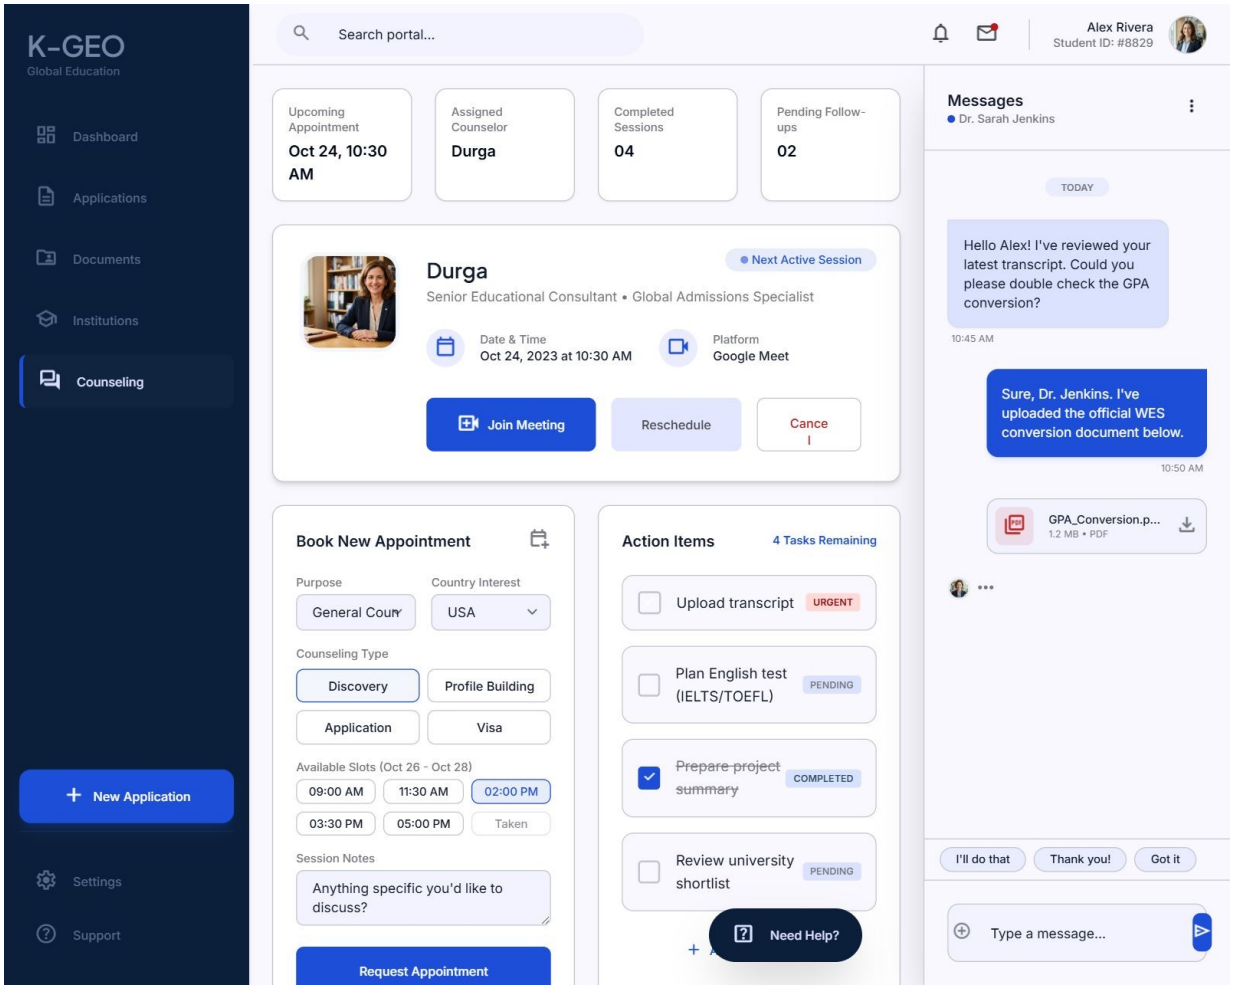

Figure 14: Counselor Dashboard and Daily Worklist

Purpose

Help each counselor know whom to counsel, what is due today and which assigned students need action.

What the screen contains

- Assigned student count
- Appointments today
- Pending reviews
- Student cards
- Tasks and follow-ups
- Messages
- Quick actions

Data and process movement

After admin assignment, the student appears automatically. The counselor completes review, records the session, assigns actions and updates application progress.

Who receives or uses this data

- Assigned counselor
- Admin monitors workload
- Student receives approved outcomes

15. Student Priority Queue

UI ownership: Admin and counselor portal

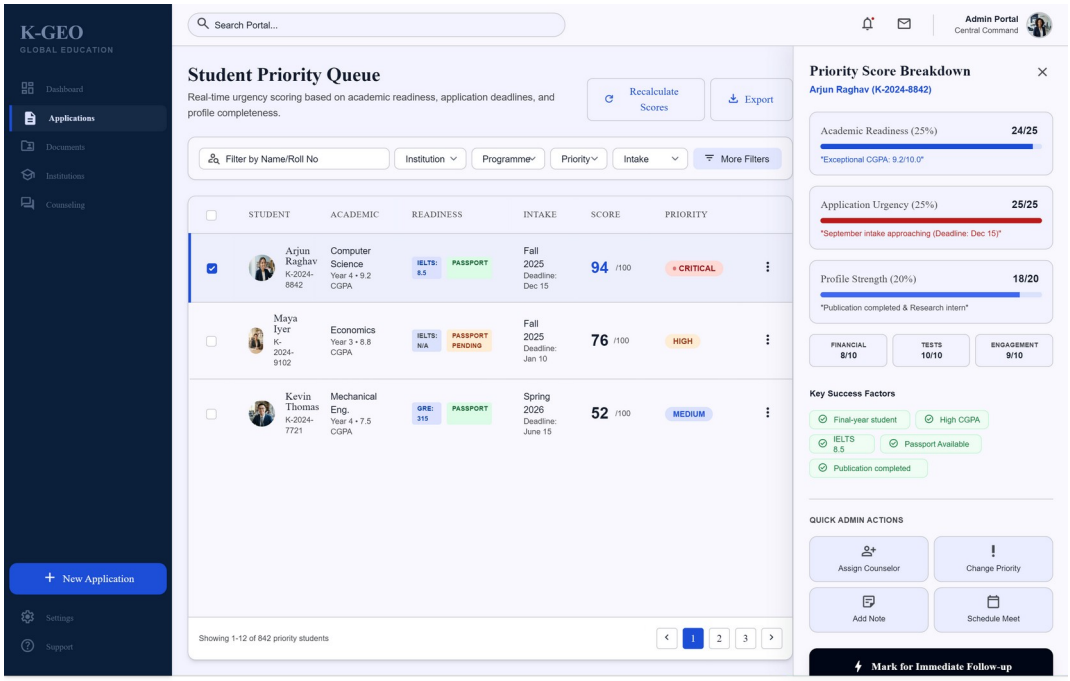

Figure 15: Student Priority Queue

Purpose

Order counseling requests fairly and visibly using FCFS as the default, while highlighting approved urgent cases.

What the screen contains

- Submission timestamp
- Student identity and department
- Year and CGPA
- Country and intake
- Priority level
- Readiness indicators
- Assigned counselor
- Queue actions

Data and process movement

New submissions enter the queue automatically. Queue position is normally calculated from submission time. Approved urgency rules can move cases forward and must be auditable.

Who receives or uses this data

- Admin manages queue and assignments
- Counselor sees assigned ordering
- Director can monitor fairness and waiting time

Important implementation notes

- Display the reason for every priority status
- Never hide the original submission timestamp
- Record manual overrides

16. Admin/Counselor Student Review Workspace

UI ownership: Admin and counselor portal

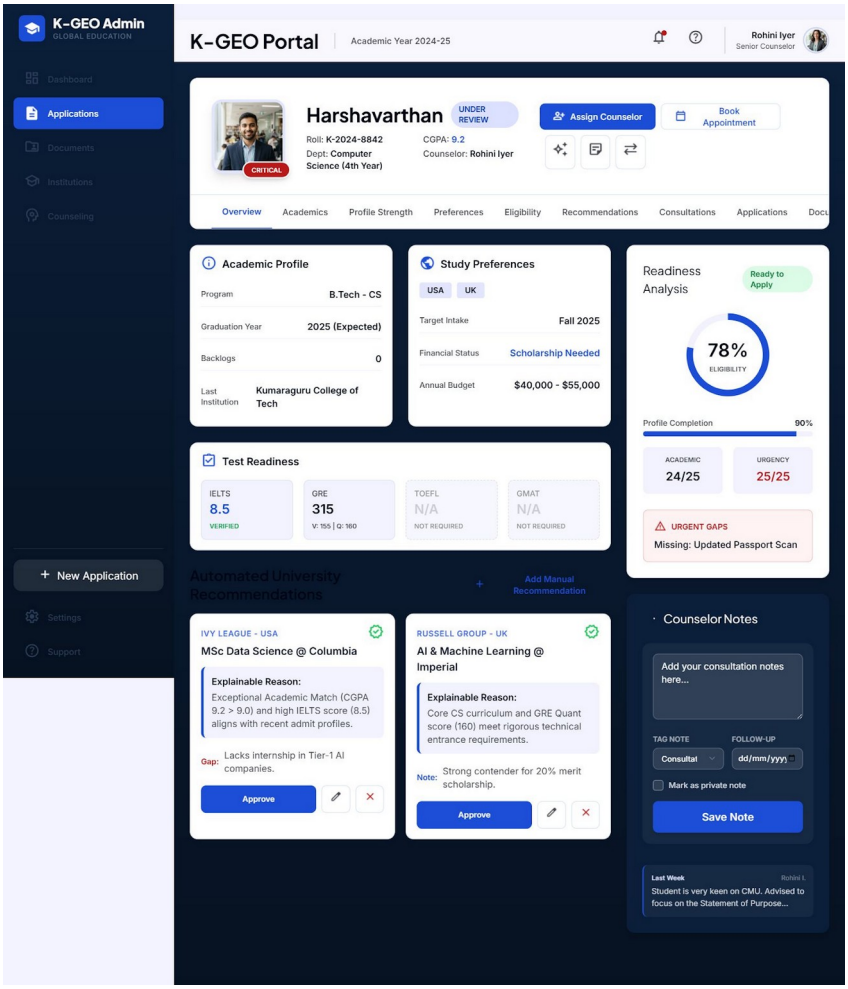

Figure 16: Admin/Counselor Student Review Workspace

Purpose

Provide a complete, decision-oriented view of one student for counseling, recommendation approval and case management.

What the screen contains

- Student header and readiness
- Academic/profile panels
- Eligibility and gap analysis
- Recommendations
- Counselor notes
- Tasks
- Appointment and communication tools

Data and process movement

The page combines data entered by the student, system-generated analysis and counselor actions. Approved outcomes flow back to the student dashboard.

Who receives or uses this data

- Counselor performs primary review
- Admin can supervise and reassign
- Student sees only approved guidance

17. Admin Operations Dashboard

UI ownership: Admin portal

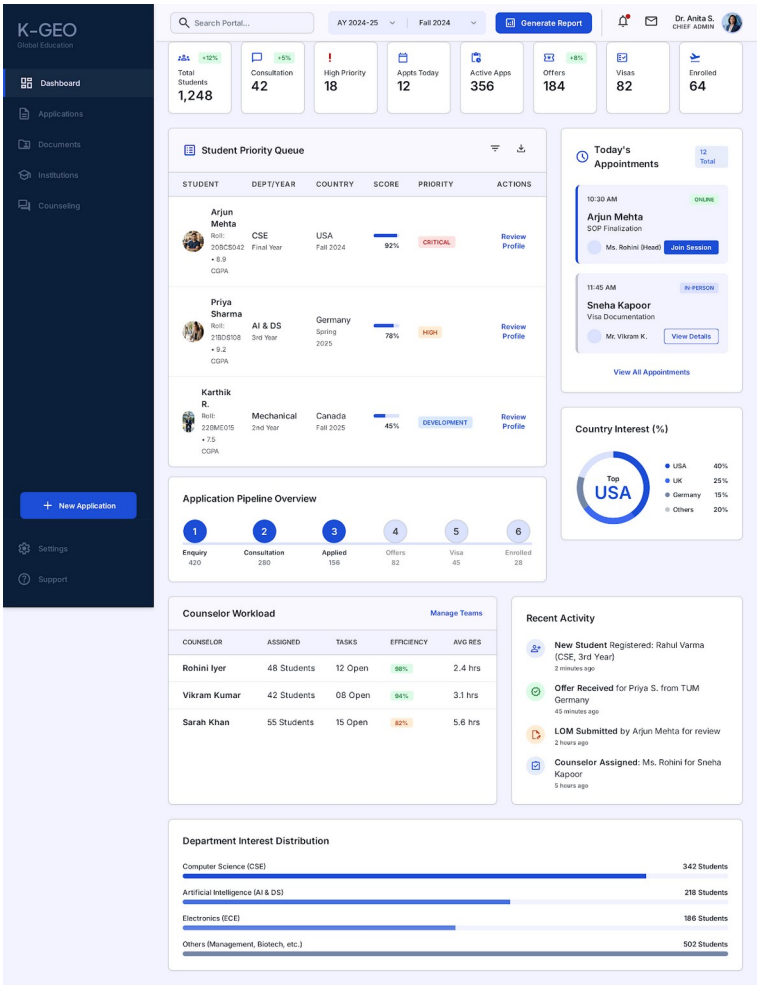

Figure 17: Admin Operations Dashboard

Purpose

Give K-GEO operations a real-time overview of registrations, unassigned students, appointments, applications and counselor workload.

What the screen contains

- Total applications and KPIs
- Recent student registrations
- Priority cases
- Appointments
- Application stages
- Counselor workload
- Operational alerts

Data and process movement

Every student submission and staff action updates the relevant totals. Admin uses this page to identify delays, assign counselors and maintain service levels.

Who receives or uses this data

- Admin is the primary user
- Director can receive read-only summary access
- Counselors contribute operational updates

18. Institutional Data Management

UI ownership: Admin portal

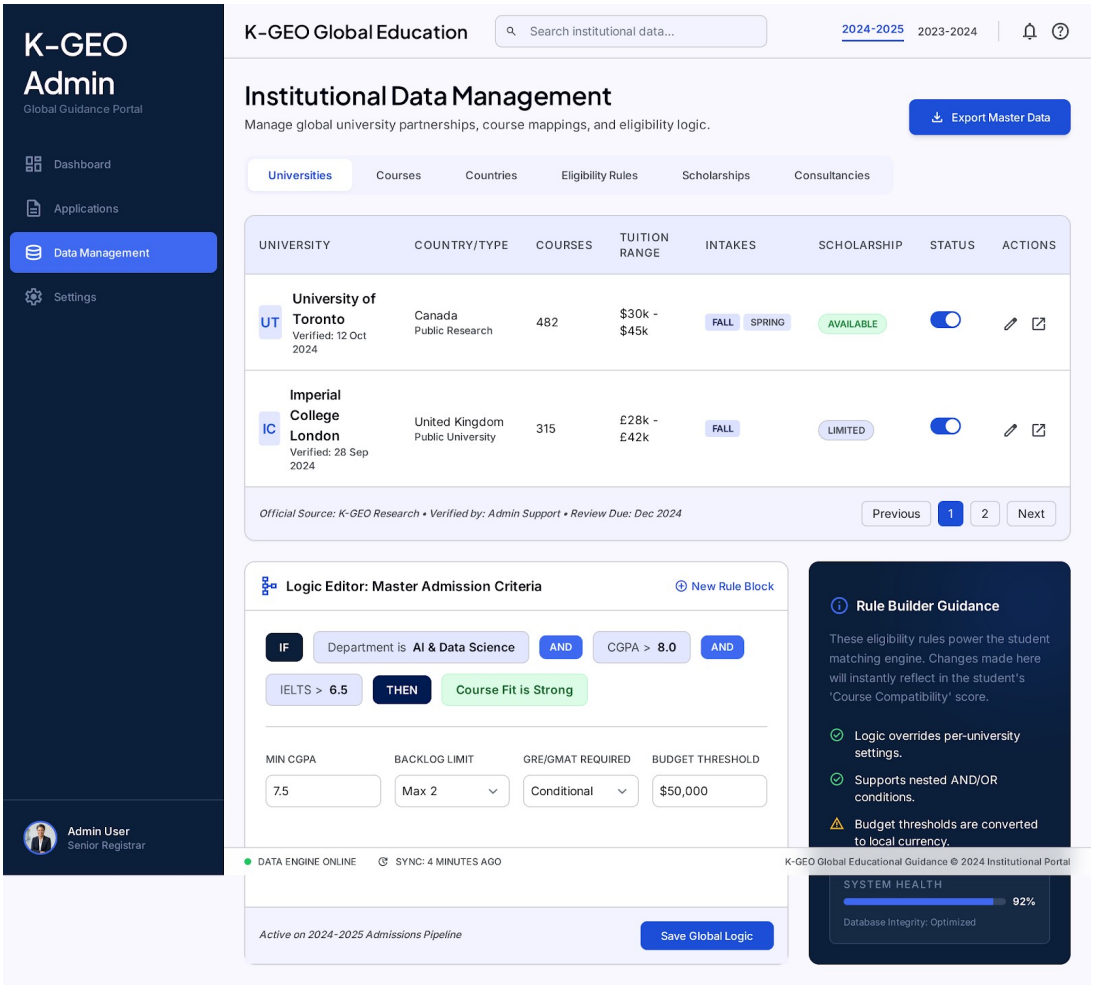

Figure 18: Institutional Data Management

Purpose

Maintain the institutions, universities, courses, destinations, partnerships, eligibility rules and verified source data that power the platform.

What the screen contains

- Institution list and status
- University/course records
- Country and destination data
- Active/inactive controls
- Last verified date
- Source and edit actions

Data and process movement

Admin changes update search, eligibility and recommendation screens. Every important requirement should carry a verified date, source and responsible data owner.

Who receives or uses this data

- Admin/data researcher maintains records
- Counselors validate practical accuracy
- Director approves governance policy

19. Director-Level Understanding of the Complete Platform

One-line summary

The UI designs together represent one connected student-success workflow: Public Awareness → Verified Student Profile → Fair Counseling Queue → Counselor Review → Personalized Recommendation → Application and Document Tracking → Management Reporting.

What the director should be able to understand from the designs

- Which pages are public and which require login.
- Which pages belong to students, counselors, admins and leadership.
- What information students enter and why it is collected.
- How a new form submission becomes an admin application and counselor case.
- How First Come, First Served queueing is maintained fairly.
- How urgent cases are highlighted without removing transparency.
- How counselor notes and recommendations return to the student portal.
- How applications, offers, visas and enrolments become management statistics.
- How university and country information is maintained centrally rather than hard-coded.

Recommended status lifecycle

Student journey status

Registered → Profile Incomplete → Profile Completed → Waiting for Counselor → Counselor Assigned → Counseling Scheduled → Counseling Completed → Recommendations Shared → Universities Shortlisted → Application Preparation → Application Submitted → Offer Received → Visa Processing → Visa Approved → Enrolled Abroad

Final project goal

The K-GEO Digital Platform will create one transparent and connected system through which Kumaraguru students can plan higher studies abroad, counselors can provide structured personalized guidance, administrators can manage the complete operation, and leadership can monitor measurable outcomes from first enquiry to successful overseas enrolment.
